

	Emergency situation	Panic situation
Situation	An emergency situation is when a life-threatening situation arises for one or more persons yet is not necessarily a cause for panic. A typical scenario is a fire in an office where the office-staff are familiar with the escape route and where evacuation can occur in a controlled way.	A panic situation can arise when many people have to evacuate a building in a life-threatening situation. Thick smoke, darkness and the presence of people not familiar with the surroundings are important factors. A typical example is a fire in a cinema.
		
Area of application	Designed for buildings through which the public do not generally pass and where the users are familiar with the operation of the escape doors. Among other things, these doors could be secondary exits in public buildings which can only be used by authorised personnel (i.e. in office buildings not used by the public at large).	For doors in escape routes where panic situations might arise. The exits and their hardware are not familiar to everyone (e.g. exit doors on public buildings).
* Luter's Recommendation *	To suit with: Luter's Mortise Lock case (M820, ANSI Function F04) and Luter's lever handle. 	To suit with: Luter's Exit device . 

M820	F04	Entry		Latch bolt operated by lever either side except when outside lever is made inoperative by push button rocker. When outside lever is lock, latch bolt may be retracted by key from outside or by rotation inside lever.
